

## How To Measure for Outdoor Blinds

### Reveal Fit (Inside)

A Reveal Fit is when your Outdoor Blind fits snugly within the recessed area or between posts.

### To Measure, We need four measurements:

- 1) Top Width inside the opening.
- 2) Bottom Width inside the opening.
- 3) Left-Side Height inside the opening.
- 4) Right-side Height inside the opening.

**Order Size:** Order the Shortest Width & the Longest Height.

### ✓ Reveal Fit Pro Tips:

- Double-check your sizes.

- If the width difference between the top and bottom is 10mm or less, you're good to go. If they vary by more than 10mm, don't worry; you can still Face Fit or use packing to level your opening.

## **How To Measure**

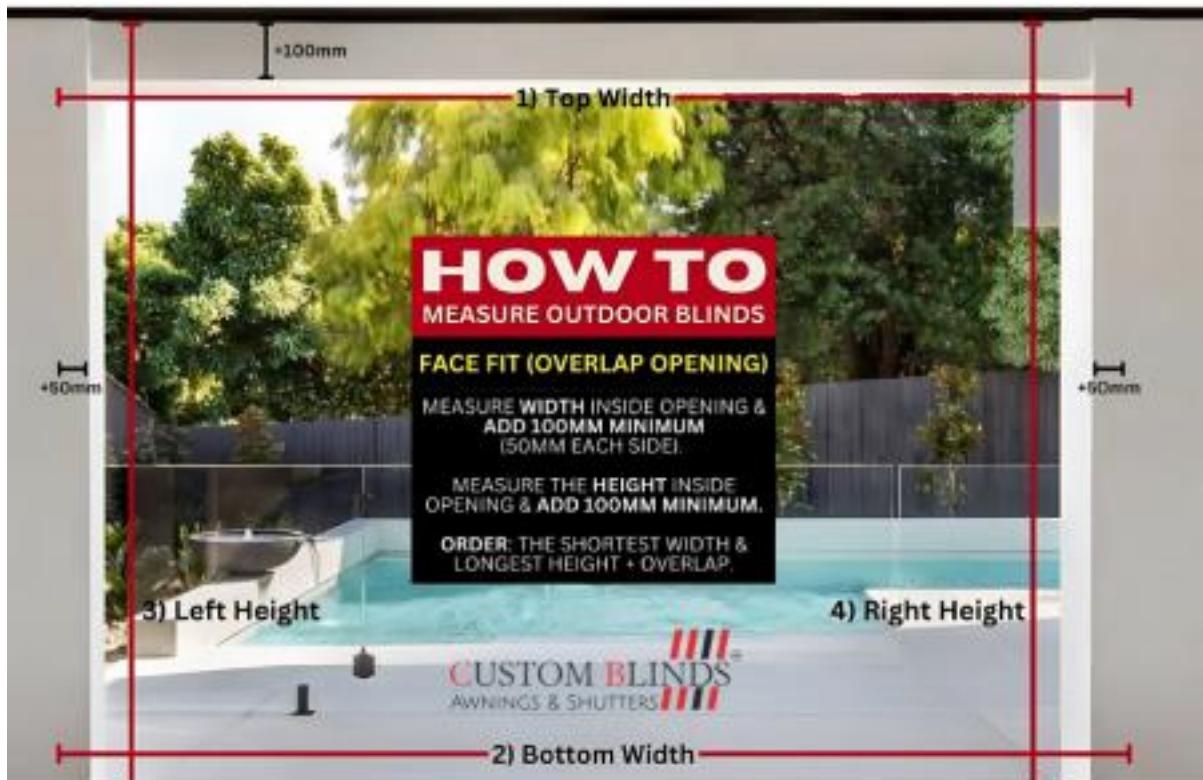

### **Face Fit (Overlap)**

**A Face Fit is when your Outdoor Blind overlaps the opening; ideal for hiding hardware or areas with handrails.**

#### **To Measure, We need four measurements:**

- 1) Top Width overlapping the opening by 100mm overall (50mm on each side).
- 2) Bottom Width overlapping opening by a minimum of 100mm (50mm on each side).
- 3) Left-side Height overlapping opening by a minimum of 100mm overall.
- 4) Right-side Height overlapping opening by a minimum of 100mm overall.

**Order Size:** Order the Shortest Width & the Longest Height + Overlap (Reveal measurements plus 100 mm)

✓ Face Fit Pro Tips:

- Double-check your sizes.
- **100mm Width overlap is the minimum; it's a good idea to add more if you have the space to minimise light gaps and hide hardware - 150mm overall is ideal.**
- Height variations are common, often for water to drain away from the house.

Important Notes

- No Deductions Required! Leave the calculations to us - We will make the necessary deductions to ensure your Outdoor Blind fits perfectly.
- We make each outdoor blind to your unique sizes and specifications and cannot be responsible for inaccuracies in supplied measurements.
- Feel free to reach out if you have any doubts before ordering—we're here to assist
